PROFESSIONAL PROFILE

Information Technology student at King Abdulaziz University with hands-on experience in backend development, AI integration, database design, and software engineering through a 200-hour government internship. Experienced with PHP APIs, Python/FastAPI, Llama/Ollama, MySQL, data preparation, testing, and Git/GitHub. Strong foundation in software engineering, cybersecurity, and networking, with a 4.96/5.00 GPA.

INTERNSHIP EXPERIENCE

Information Technology Intern *Jun 2026 – Aug 2026*

Digital Transformation Agency, Spending Efficiency Department — Jeddah Municipality

- Performed backend architectural refactoring of an AI-based Smart Idea Evaluation System, migrating frontend-embedded logic into a dedicated PHP backend/API layer covering authentication, idea workflows, AI evaluation, notifications, and administrative operations.
- Integrated the PHP backend with a local FastAPI service supporting a Llama 3.1 8B model with a LoRA adapter, adapting the system from a temporary Google Colab/Cloudflare endpoint to a locally hosted AI service.
- Contributed to ERD and database design for users, ideas, evaluations, notifications, and related workflows.
- Generated a 525-entry dataset and developed a Python automation program to annotate ideas using a local LLM through Ollama; performed large-scale data cleaning and distribution analysis.
- Conducted end-to-end integration testing and debugging across frontend, backend, database, and AI components, and supported GitHub organization and final release documentation.

TECHNICAL PROJECTS

AI-Based Smart Idea Evaluation System | PHP · Python · FastAPI · MySQL · Llama 3.1 · LoRA · Ollama · Git/GitHub

- Internal platform combining a PHP/MySQL web application with a locally hosted Llama 3.1 8B + LoRA inference service to evaluate submitted ideas on innovation, feasibility, sustainability, cost, and business value.

AES Docker Encryption System | Java · Docker · GitHub Actions

- Developed a Java application implementing AES encryption (ECB/CBC modes); containerized with Docker and integrated automated builds via GitHub Actions.

HR Leave Management System | Java · Object-Oriented Design · System Analysis

- Built a Java-based HR system for employee records and leave requests using system analysis and object-oriented design.

EDUCATION

Bachelor's Degree in Information Technology *Aug 2022 – Jun 2027*

King Abdulaziz University, Saudi Arabia — GPA: 4.96/5.00

TECHNICAL SKILLS

- **Programming:** Java, Python, PHP, HTML, SQL
- **Backend & AI:** REST API design, FastAPI, MySQL, LLM fine-tuning (LoRA), Llama 3.1, Ollama
- **Tools:** Docker, Git & GitHub, XAMPP, Cisco Packet Tracer, Power BI, Microsoft Office
- **Software Engineering:** System Analysis, ERD, UML, SDLC, Testing & Debugging

CERTIFICATIONS

- Advanced Cybersecurity Training Program | KAUST Academy | April 2025
- Intro to Cybersecurity Essentials | IBM | January 2025
- ISC2 Cybersecurity Courses (Access Control, Incident Response, Security Operations) | January 2025
- Cybersecurity Summer Bootcamp | National Cybersecurity Authority | Jul 2024
